2.9 Risk Disclosure & Disclaimer

It should be clearly understood that portfolio of the Scheme is subject to market fluctuations and risks inherent in all such Investments. The value of Units in the Scheme may appreciate as well as depreciate, and the Fund may or may not declare a dividend. Past performance does not necessarily indicate future performance.

Investment process requires disciplined risk management. The Management Company would incorporate adequate safeguards for controlling risks in the portfolio construction process of AIIF. The risk control process involves reducing risks through optimal portfolio diversification. AIM believes that this diversification would help achieve the desired level of consistency in returns.

AIM investment team aims to identify securities following proper credit evaluation of the securities proposed to be invested in. It will be guided by the ratings of Rating Agencies such as Pakistan Credit Rating Agency or JCR-VIS Credit Rating Company Limited or any other rating agencies that may be registered with SECP from time to time or any other reputed international credit rating agencies

The Fund will invest in Authorized Investments which are subject to various degrees of risk. The risk emanates from various factors that include, but not limited to:

1. **Credit Risk** - Credit risk is comprised of default risk, credit spread risk and

downgrade risk. Each can have a negative impact on the value of a income instruments.

- a) **Default risk** is the risk that the issuer will not be able to pay the obligation, either on time or at all.
 - b) **Credit spread risk** is the risk that there will be an increase in the difference between the return/ mark-up rate of an issuer's debt instrument and the return/mark-up rate of a debt instrument that is considered to have little associated risk (such as a government guaranteed debt instrument or treasury bill). The difference between this return/mark-up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income securities including money market instruments.
 - c) **Downgrade risk** is the risk that a credit rating agency, such as PACRA or JCR-VIS, will reduce the credit rating of an issuer's securities. Downgrades in credit rating will decrease the value of those debt instruments.
2. **Derivative Risk** - Shariah compliant derivatives may be used to limit or hedge potential losses associated debt instruments and return/mark-up rates. This process is called "hedging". Shariah compliant derivatives may also be used for non-hedging purposes - to reduce transaction costs, achieve greater liquidity, create effective exposure to financial markets or increase speed and flexibility in making portfolio changes. Any use of derivatives has risks, including:
- a) The hedging strategy may not be effective.
 - b) There is no guarantee that a market will exist when a Fund wants to buy or sell the shariah compliant derivative contract.
 - c) A large percentage of the assets of a Fund may be placed on deposit with one or more counter parties, which exposes the Fund to the credit risk of those counterparties.
 - d) There is no guarantee that an acceptable counterparty will be willing to enter into the shariah compliant derivative contract.
 - e) The counter-party to the shariah compliant derivative contract may not be able to meet its obligations.
 - f) The Exchanges on which the shariah compliant derivative contracts are traded may set daily trading limits, preventing a Fund from closing out a particular contract.
 - g) If an Exchange halts trading in any particular shariah compliant derivative contract, a Fund may not be able to close out its position in that contract.
 - h) The price of a shariah compliant derivative may not accurately reflect the value of the underlying security or index.
3. **Concentration Risk** - The Fund may concentrate its investments in a relatively small number of securities, certain sectors or specific regions. This may result in higher

volatility as the value of the portfolio will vary more in response to changes in the market of these securities, sectors or regions.

4. **Return/Mark-up Rate Risk – Shariah Complaint** income instruments, which include (government Islamic Securities) pay certain rate of return/mark-up. The value of the fund, due to its holdings in Shariah Compliant income instruments, will rise and fall as return/mark-up rates change. For example, when return/mark-up rates fall, the value of an existing instrument will rise because the return rate on that instrument is greater than prevailing return/mark-up rates and vice versa.
5. **Government Regulation Risk** - Government policies or regulations are more prevalent in some sectors than in others. Funds that invest in these sectors may be affected due to change in these regulations or policies, which directly or indirectly affect the earnings and/or the cash flows and/or any governmental or court orders restraining payment of capital, principal or income.
6. **Voluminous Purchase/Redemption of Fund Units Risk** - Any significant transaction made by any investor could significantly impact a Fund's cash flow. If the third party buys large amounts of shares or Units of a Fund, the Fund could temporarily have a high cash balance. Conversely, if the third party redeems large amounts of shares or Units of a Fund, the Fund may be required to fund the redemption by selling securities at an inopportune time. This unexpected sale may have a negative impact on the performance of your investment.
7. **Liquidity Risk** - Some companies have limited market float of their issued securities and hence are not actively traded in the trading instrument market. Securities issued by such companies may be difficult to buy or sell, which may cause the value of the Funds that buy these securities to rise and fall substantially because any buying or selling of such companies may have a great impact on price of that security or at times some securities if sold before maturity would lead to a greater loss therefore such securities suffer from liquidity risk.
8. **9 Market Risk – This risk involves volatility in securities prices resulting from their dependence on market sentiment, speculative activity, supply and demand for the securities and liquidity in the market. The volatility in securities prices results in volatility in the NAV based price of the Unit of the Fund.**
9. **Other Risks Involved:**
 - a) Mismanagement of the investee company, third party liability whether through class action or otherwise or occurrence of other events such as strikes, fraud etc., in the company in which the investment is made.
 - b) Break down of law and order, war, terrorist activity, natural disasters etc .
 - c) Senior rights of creditors over the shareholders in the event of winding up.

Investment in this Fund is suitable for investors who have the ability to take the risks associated with financial and capital market investments. Capital invested in the

financial and capital markets could in extreme circumstances lose its entire value. However, diversification of the investment into a number of highly liquid, income instruments tends to reduce the risk substantially. The historical performance of this Fund, the financial and capital markets or that of any one security or transaction included in the Fund's portfolio does not indicate future performance. Prices of Units of the Fund and income from them may go up or down. Under exceptional (extraordinary) circumstances, the Management Company may declare suspension of redemptions, invoke a queue system or announce winding-up in such events the investor will probably have to wait for payment beyond the normal period and the redemption amount so determined may be lower than the price at the time the redemption request is lodged. Investors are advised to read the relevant clauses of the Fund's Trust Deed for more detailed information regarding this clause related to risk
